Polished stainless steel

About d line

At d line, we design and craft architectural hardware, sanitary ware and accessories that quietly support life's daily routines. From the lever handle turned as you enter a room to the tap used each morning, our products are made to be touched, used and trusted, every single day.

Since 1971, we've followed a design tradition rooted in simplicity, honest materials and enduring quality. Every detail reflects our commitment to durability: reducing waste, designing responsibly, and making better choices for people and planet. We care deeply about the people we work with and the products we put into the world. From public spaces to private homes, d line products are made to perform beautifully now and for generations to come.

About Re-handle – why it matters

d line products are made to last. With Re-handle, we can extend their life by maintaining the form and function they were designed for.

Nearly 63% of our carbon footprint comes from our choice of materials.

That is why Re-handle is also about preserving the materials already in use, reducing the need for new resources and making better use of what we already have.

↑100

Up to 100-year product guarantee

↑91%

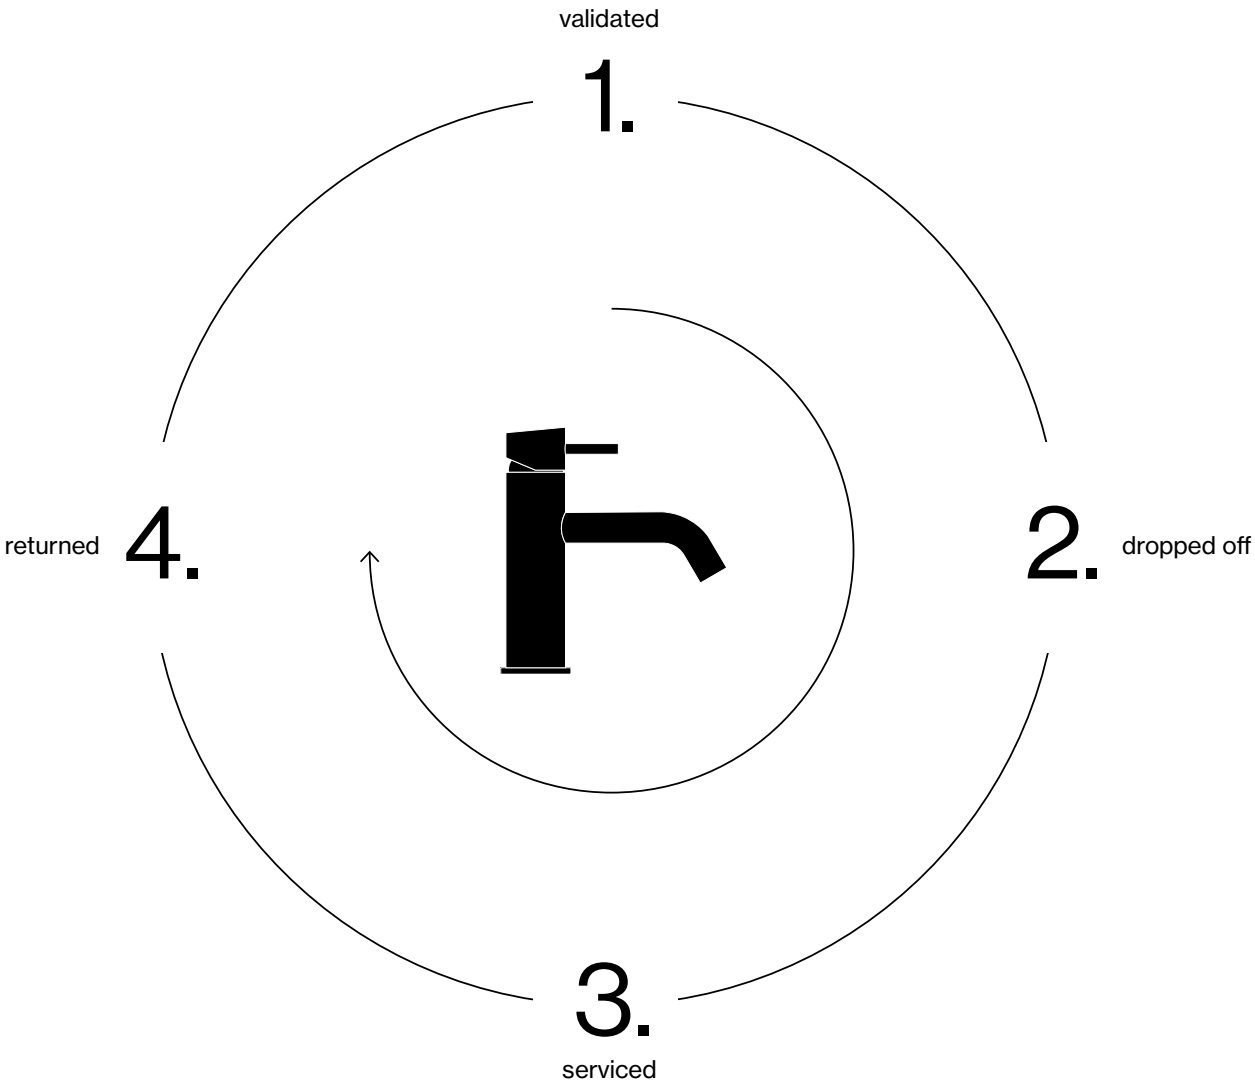

Up to 91% lower CO_2 emissions

↓$

Up to 60% lower cost than buying new

How it works

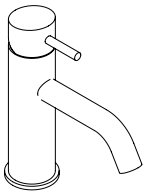

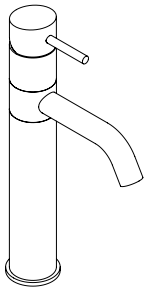

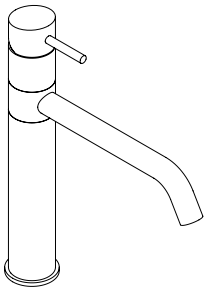

- Service lead time approx. 8 weeks
- Loaner products available during the service period
- Renewed 20-year warranty
- Available for satin and polished stainless steel
- More than 250 products can be Re-handled

Satin stainless steel

Materials and surfaces

Stainless steel

Stainless steel is a metal alloy; its hardness and resistance are key factors in d line's choice of material. When the chromium content in the material reacts with oxygen in the air, a thin, invisible layer of chromium oxide forms on the surface, protecting against corrosion and rust.

- Recyclability: 100% recyclable; it can be melted down and reused without any loss of quality.
- Corrosion resistance: Resistant to rust and corrosion.
- Durability: Extremely strong and resistant to mechanical wear and deformation. This ensures a long service life, even in harsh and exposed environments.
- Aesthetics: A simple, clean, and minimalist look, whether you choose a brushed or polished finish.

These are some of the qualities that make stainless steel an optimal and versatile material for bathroom fixtures and accessories – the most demanding environment in the home. This is precisely why d line has chosen to incorporate this material into its product range.

Cleaning stainless steel

To preserve the natural properties of stainless steel, regular cleaning and proper maintenance are required.

Daily cleaning

- Use a soft cloth or sponge and a mild soap solution. Clean in the direction of the grain (brushing direction) to avoid scratches.
- Rinse thoroughly with clean water to remove soap residue and wipe dry with a dry cloth to prevent spots and limescale deposits.

Fingerprints and stubborn stains

- Clean the surface with a cloth and glass cleaner or a mild mixture of vinegar and water.

Stubborn stains

- Use a cleaning agent specifically designed for stainless steel – avoid scouring pads and abrasive powders, as these can scratch the surface.

Polishing

- A glossier finish can be achieved by polishing with a microfiber cloth after cleaning.
- Polishing agents specifically for stainless steel are also available; these can help protect the surface against fingerprints and stains.

Stainless steel maintenance

Although stainless steel is rust-resistant, it can still corrode if exposed to saltwater or harsh chemicals for extended periods. Therefore, avoid using bleach, strong acids, or highly acidic cleaning agents on stainless steel.

Wipe the surface dry after contact with water to prevent limescale deposits and rust spots.

Clean your stainless steel products regularly to prevent issues before they potentially develop into major damage. By following our guidelines, you can keep your products looking great and in good condition for many years.

PVD on stainless steel

PVD coating on stainless steel is generally more durable and stronger than on other materials and surfaces.

The PVD coating helps enhance the material's resistance and protects against wear, deformation, and chemical exposure.

However, please note: PVD is not scratch-proof, even on stainless steel.

PVD

PVD is a surface treatment where a thin coating is applied to the steel during a vacuuming process. Here is formed an ultra-thin but very durable surface that at the same time purely aesthetic allows for the creation of the same products in different metallic shades.

- Environmentally friendly process: none are used in production harmful chemicals. This makes the surface treatment more environmentally friendly than traditional surface treatments, such as galvanizing and chrome plating.

- High abrasion resistance: the abrasion resistance is further improved and extends the life of the product.

- Corrosion protection: one of the qualities of the PVD coating is that it helps to reduce the risk of corrosion, which makes PVD products ideal for use in harsh and exposed environments.

- Aesthetic possibilities: with the PVD coating, stainless steel can have different colours, without the treatment compromising the material's strength or properties.

While stainless steel in itself is wear-resistant and corrosion-resistant, PVD coatings can change and refine the aesthetic appearance and performance, where both high wear resistance and color variants are desired. It is often used on high-end consumer goods where both functionality and durability are key elements.

Cleaning of PVD surfaces

The PVD coating is very resistant to wear, corrosion and discoloration, but requires careful and regular cleaning to maintain its appearance and properties.

Daily cleaning

- Use a soft cloth (e.g., microfiber) to remove dust, fingerprints, and light dirt from the surface. Use only mild soap (e.g., dish soap) and warm water. Avoid harsh cleaning agents or chemicals, as they can damage the coating.

- Wipe gently with a damp cloth and rinse thoroughly with clean water to remove soap residue. Always finish by wiping with a dry, soft cloth to prevent water spots and limescale deposits.

Fingerprints and stubborn stains

- Clean the surface with a cloth and glass cleaner or a mild vinegar/water mixture (avoid products containing ammonia or alcohol, as these can be too harsh).

Stubborn stains

Use a soft sponge or cloth with a mixture of mild soap and warm water. Avoid scouring pads and abrasive cleaners, which can scratch or damage the surface.

Polishing

- A glossier finish can be achieved by polishing with a microfiber cloth after cleaning.

Maintenance of PVD surfaces

- Although the PVD coating is durable and corrosion-resistant, it is still important to clean the surfaces properly to preserve their properties and appearance. Prevent scratches by avoiding scouring pads, steel wool, or other coarse, sharp materials that could scratch the surface. Carefully follow the instructions for the cleaning agents used, and avoid bleach, acid, ammonia, or products containing abrasive ingredients (check the product instructions to see if it is suitable for coated surfaces).

In areas with hard water, limescale deposits can be an even greater challenge. Wipe away water spots promptly to prevent limescale buildup on the surfaces.

Wipe the surfaces regularly to prevent the accumulation of dirt and soap residue.

PVD surfaces are both durable and beautiful, but they require gentle cleaning and maintenance.
By avoiding abrasive cleaners and harsh chemicals, you can ensure the surface retains its attractive appearance for many years.

Warranty and claims

Warranty Terms

In addition to standard statutory rights, d line offers an extended warranty period on all products.
All warranties apply from the date of purchase.

The extended warranty depends on the product; see below:

20-year product warranty

• 20-year warranty on stainless steel products, covering functionality but excluding wear parts.

• 5-year warranty on the PVD coating.

Warranty coverage

20-year drip-free warranty on the cartridge. Replacements are supplied free of charge.

Wear parts (gaskets) and thermostat units are covered by a 5-year warranty.

Labor costs for the replacement of cartridges and thermostat elements are covered for up to one hour.

The warranty is void in the event of damage to or failure of any product or component if the product:

• Has been modified, unless the modification has been approved by d line.

• Has not been installed, operated, repaired, or maintained in accordance with the installation, handling, maintenance, cleaning, or operating instructions.

See the complete and most recently updated warranty statement at dline.dk

Claims handling

In the event of a claim, we require documentation of the faults – both to improve our processes and to have concrete evidence of the errors and defects.

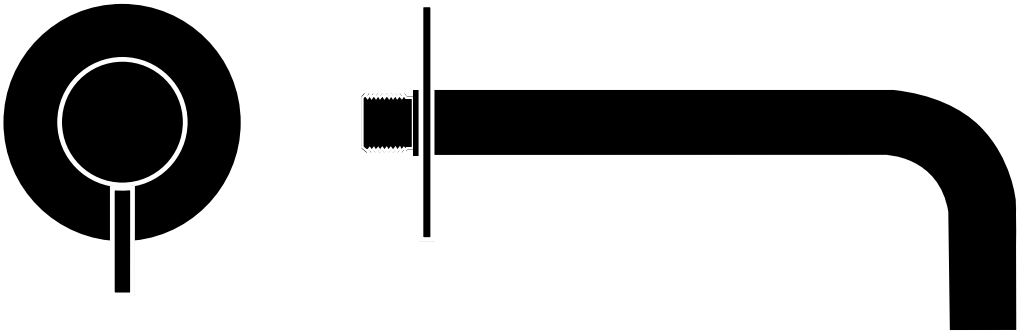

For claims, we reserve the right to repair the product at our facilities. A shipping label will be provided free of charge. Please submit the following:

• Photos and a brief description of the claim

• Copy of the purchase invoice

• End customer's name and address

Send the above to service@dline.com or contact customer service at 72 17 01 38.
