

By choosing stainless steel fixtures, you have made a responsible, long-term investment. Stainless steel is a highly durable material with an extended lifespan, but like all products, it requires regular care to maintain its refined appearance over time.

Shower fixtures

A simple yet effective tip is to tilt the overhead or hand shower after use. This allows any remaining water in the shower and pipes to drain immediately. By doing so, you avoid water dripping out hours later onto tiles and glass surfaces that have already been dried.

Taps and spouts

Regularly descale the outlet of your spout to prevent limescale from building up. This helps protect both the surface finish and the material, ensuring smooth water flow and long-lasting performance.

General care

The best way to care for your products is to wipe them dry after use. This prevents water and soap residues from forming deposits on the surface, reducing the need for more intensive cleaning later on.
